

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Quiz Game

1. Introduction

1.1 Purpose

The purpose of the Quiz Game is to provide users with a simple and interactive application for answering

multiple-choice questions. The system allows users to start a quiz, select answers, move through questions,

and view their final score after completing the quiz.

1.2 Scope

The Quiz Game provides a user-friendly interface through which users can participate in a quiz. The system

displays questions with multiple-choice answers, accepts the user's selections, processes the answers, and

displays the final result. The application can be implemented as a web, desktop, or mobile application

depending on the project requirements.

1.3 Objectives

- To provide an easy-to-use quiz application.
- To display questions and multiple-choice options clearly.
- To allow users to select and submit answers.
- To calculate and display the user's score.
- To provide a simple and interactive quiz experience.

2. Functional Requirements

- The system shall allow the user to start the quiz.
- The system shall display quiz questions with multiple-choice options.
- The system shall allow the user to select an answer.

- The system shall accept and process the selected answer.
- The system shall allow the user to move to the next question.
- The system shall calculate the user's score based on the answers.
- The system shall display the final score after completing the quiz.
- The system shall display the quiz result/status to the user.
- The system shall store quiz questions and scores using local storage or a database if required.

3. Non-Functional Requirements

- Usability: The system shall provide a simple, clear, and user-friendly interface.
- Performance: The system shall respond to user actions and display questions without unnecessary delay.
- Reliability: The system shall correctly process selected answers and calculate the score.
- Compatibility: The application shall be usable on a supported computer, laptop, tablet, or smartphone.
- Maintainability: The system should be easy to update with new questions and quiz content.
- Security: User and quiz data, if stored, should be protected from unauthorized access.
- Availability: The quiz application should be available whenever the user launches the application.

4. Interface Requirements

4.1 GUI (Graphical User Interface)

- The system shall provide a simple and user-friendly graphical interface.
- The system shall provide a Start button to begin the quiz.
- The system shall display questions and multiple-choice options.
- The system shall provide buttons to select answers and move to the next question.
- The system shall display the user's score after completing the quiz.

4.2 Input Interface

- The user shall select an answer from the given multiple-choice options.
- The user shall click the Start button to begin the quiz.
- The user shall click the Next button to proceed to the next question.

- The user shall provide valid inputs through the available buttons.

4.3 Output Interface

- The system shall display quiz questions and answer options.
- The system shall display the selected answer.
- The system shall display the final score after the quiz.
- The system shall display the quiz result/status to the user.

4.4 Hardware Interface

- The system shall require a computer, laptop, tablet, or smartphone.
- The device shall have a display screen for showing the quiz interface.
- The device shall have an input mechanism such as a keyboard, mouse, touchscreen, or touchpad.

4.5 Software Interface

- The quiz game shall run on a supported operating system.
- The system shall require a suitable web browser if implemented as a web application.
- The system shall use a database or local storage if required to store quiz questions and scores.
